

# TABLES OF HOUSE DIVISION

Compiled by C. E. O. CARTER

These Tables are based upon a system of domification in which the Equator is divided into twelve equal arcs by circles passing through the celestial poles, the circle which is the cusp of the First House passing through the ascending degree at the place and time for which the figure is erected.

Thus, it is necessary firstly to obtain the ascendant in the usual manner, either by tables for the latitude in question or by calculation, and then the other cusps can be taken from the Tables here printed. In these the ascendant is taken to the exact degree of longitude; the other cusps are given to the nearest degree, or half-degree where the cusp falls exactly between two degrees.

Except when 0 Aries is on the horizon, either rising or setting, the cusp of the Tenth House will not coincide with the M.C., which should be entered as a sensitive point, of unquestionable importance.

The Tables are applicable to all latitudes, once the ascendant has been determined. When this falls in the latter half of the zodiac, use the degree-numbers in the Tables but reverse the signs.

It is suggested that a cuspal orb of about 10° should be used and that planets falling within this orb should be regarded as having an influence through both Houses.

January 1946.
